INDEX
Information for Contributors

The American Journal of Epidemiology publishes original field and laboratory contributions on infectious and non-infectious acute and chronic diseases and related statistical studies. Editorial, reviews and comments on various aspects of epidemiologic research and letters to the editor are also published.

Copyright. In accordance with the copyright law effective January 1, 1978, authors of manuscripts accepted for publication in the Journal will be asked to sign a Publication Agreement for the assignment of copyright to The Johns Hopkins University School of Hygiene and Public Health. The rights and obligations noted in the Agreement are the same as have always applied to papers accepted for publication, namely: 1) that the data have not been published previously (except if a commentary) nor is the paper under consideration for publication elsewhere; 2) that, upon acceptance by the Journal, a paper may not be submitted elsewhere for simultaneous or later publication without written permission of the Journal; 3) that the published manuscript is the sole property of the Journal, copyrighted in the name of The Johns Hopkins University School of Hygiene and Public Health, and that the author grants to the University the exclusive right to copyright the article.

Manuscripts. The detailed instructions for preparation of manuscripts are available on request from the editorial office. Authors should note that the Journal periodically updates these instructions. Manuscripts should be double-spaced on one side of 8¼ × 11-inch paper. A current issue of the Journal provides a general guide to the format. The original and two complete copies, including tables and figures, are required. The cover letter should be in duplicate. Include in the body of the cover letter a phone number and the address to which galleys, etc., should be sent.

Abstract and Keywords. An abstract not exceeding 200 words and a list of not more than 8 keywords are published with each article in the Original Contributions section. Biological Abstracts carries directions for the preparation of abstracts in its January issue each year. Keywords (in alphabetical order) should be selected as far as possible from a current copy of the National Library of Medicine's Medical Subject Headings (MeSH).

Abbreviations. An alphabetical list of abbreviations used in the paper, and their meanings, should be supplied. Abbreviations should be defined the first time used in the text.

References. References are consecutively numbered (in parentheses) in the text. The list of references should be double-spaced and should follow the style of Index Medicus. Inclusive pages are required.

Tables and Figures. Tables should be numbered in the order in which they are mentioned in the text. Eight by ten inch glossy prints of line cuts and half-tones are required. If figures or tables are taken from a previously published paper (whether the author's or another's), the contributor must provide written permission from the copyright holder.

Charges. Effective January 1, 1978, authors will be charged $55 per page for printed pages in excess of 4. (Multi-part papers in a single issue are considered a single contribution in computing charges for printed pages over 4.) Because of financial restrictions, waiver of excess page charges can be granted only in cases of undue hardship (requests for waiver of page charges must be made at the time the manuscript is submitted). A flat rate of $20 is charged per article for author's alterations; additional charges may be assessed for changes in tables and figures and lengthy or numerous changes in text.

Reprints. Authors are requested to order enough reprints to meet anticipated needs. Authors should send reprint orders to Everybodys Press, Fame Ave., Hanover, PA 17331, USA. Published manuscripts may not be reproduced without permission of the Journal. If the supply of reprints is exhausted, or if the author fails to order reprints before the issue is published, the author should contact the Journal office for rate schedules and specific permission to reproduce.
