The Johns Hopkins Bloomberg School of Public Health
Department of Epidemiology

Faculty Position in Cardiovascular Epidemiology

The Department of Epidemiology at the Johns Hopkins Bloomberg School of Public Health invites applications for a tenure-track position in cardiovascular epidemiology at the rank of Assistant Professor. The cardiovascular epidemiology program includes a large NIH funded training program, strong linkages to the School of Medicine, and a number of large ongoing studies (www.jshph.edu/idep).

The candidate will be expected to conduct independent and collaborative epidemiologic investigations into cardiovascular disease and diabetes etiology and prevention and to be committed to excellence in teaching and mentoring graduate students. The ability to apply epidemiologically rigorous methods to literature reviews and state of the art clinical and laboratory investigations in epidemiologic cohorts is critical. Applicants should have a doctorate in epidemiology or a health sciences doctorate with an advanced degree in epidemiology.

The Department of Epidemiology is one of the oldest and largest departments of epidemiology in the world, with over 200 doctoral and masters students and a diverse research program directed by 80+ faculty. Interested applicants should send their curriculum vitae and the names of three references by July 15, 2006 to:

Jonathan M. Samet, M.D., M.S.
Professor and Chairman
Department of Epidemiology
Johns Hopkins Bloomberg School of Public Health
615 N. Wolfe Street, Suite W6041
Baltimore, MD 21205

Johns Hopkins University is an affirmative action/equal opportunity employer and actively encourages interest from women and members of underrepresented groups.

AMGEN VISITING PROFESSORSHIP: BIOSTATISTICS AND EPIDEMIOLOGY

Amgen wishes to host a Visiting Professor for a period of 6 to 12 months commencing in either 2006 or 2007. Candidates with an excellent track record of relevant research can put their knowledge and expertise to work with our biomedical research and clinical development teams. As we further expand our capabilities in these areas, there is a wide range of research topic/publication opportunities and a chance to forge ongoing peer relationships. Specifically, you will collaborate on developing and implementing new methods for clinical trial design and analysis, biomarkers and imaging technologies, safety surveillance, epidemiologic studies and late-phase projects.

At this exciting time for Amgen, the study design and analytical methods of early development trials, large therapeutic trials and observational studies are all part of our global efforts. As Visiting Professor, you will be able to contribute to Amgen’s discovery and development of human therapeutics by utilizing your specialty skills to focus on particular challenges, provide some general training in biostatistical/epidemiologic methods, host seminars and consult on other company projects.

Join Amgen in our Thousand Oaks, California location for a stimulating and rewarding visiting professor program. Qualified candidates should apply before September 15, 2006, by forwarding a CV and a letter of interest describing your objectives to: George Williams, VP Global Biostats & Epidemiology, at george.williams@amgen.com.
